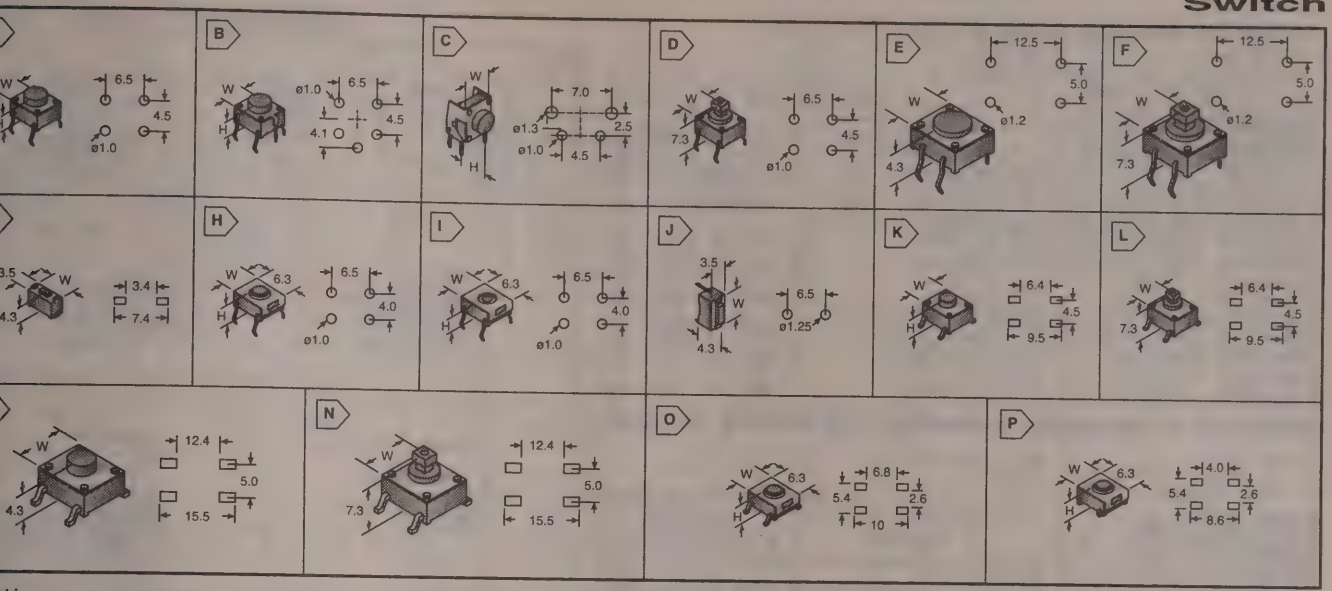
MOUNTAIN SWITCH Tactile Switches and Caps

Mountain Switch



TACTILE SWITCH THRU-HOLE TYPE

Features:

- Available sharp click feel with a positive tactile feedback. Due to small movement distance (stroke), user experiences distinct sensation when the switch "clicks" into place.
- Ultraminiature and light weight structure suitable for high density mounting.
- Insert molding in the contact with special treatment prevents flux build-up during soldering and permits auto-dipping.
- The washable type switches are designed to allow submersed washing after soldering

DIMENSIONS (mm)

OPTICALLY ISOLATED SOLID STATE RELAYS

OptoMOS® line of solid state relays uses discrete semiconductor components and the patented OptoMOS tecture to deliver fast, reliable, bounce-free switching in a compact design. The small 4-pin SOP relays combine -of-the-art, double-molded, vertical-construction packaging with high performance to give you a reliable product. dual pole OptoMOS relays combine two independent relays into a single component. And, the common input MOS relays provide a design alternative where two independent outputs are driven by the same input signal.

Features:
- Low drive current
- High reliability
- Optically isolated I/O
- Operating Temp: -40° to 85°C
- Machine washable, wave solderable
- AC/DC switching

Applications:
- Telecommunications
- Datacommunications
- Electronic switching
- Industrial controls
- Medical equipment
- Security
- Instrumentation

RON. G3VM SERIES: MOSFET RELAYS

ures:
stry's smallest MOSFET relays
d state technology means hundreds of millions of operations
t in white mold resin which reflects more light from the LED back to the MOSFET driver than black resin.
e resin also dissipates heat better than black resin, so relays can be placed closer together on the board.
M-3FL has a current limiting feature

Applications:
- Automated test equipment
- Communications
- Security
- Medical ultrasound equipment
- Automotive diagnostic equipment

An independent firm ran a test on the only part of the G3VM that could waver in performance - the LED. After simulated operation of 100,000 hours (equivalent to 11+ years!) the G3VM was still operating successfully!

SHARP SOLID STATE RELAYS

These solid state relays are an integration of an infrared emitting diode (IRED), a Phototriac Detector and a main output Triac. These devices are ideally suited for controlling high voltage AC loads with solid state reliability while providing 4.0kV - 5.0kV (Viso (rms)) isolation from input to output.

Features:
- Lead Free

Applications:
- Isolated interface between high voltage AC devices and lower voltage DC control circuitry.
- Switching small capacity motors, fans, heaters, solenoids, and valves.
- Phase or power control in applications such as lighting and temperature control equipment.

For quantities of 100 and up, call for q

PKLCS SERIES PIEZO ALARMS

Taking advantage of extensive acoustic and mechanical designing technology and high performance ceramics, Murata has developed an SMD piezoelectric sounder that suits the thin, high-density design of electronic equipment. Microcomputers are widely used for microwave ovens, air conditioners, cars, toys, timers, and other alarm equipment. Externally driven piezoelectric sounders are used in digital watches, electronic calculators, telephones, and other equipment. They are driven by a signal (ex, 2048Hz or 4096Hz) from an LSI and provide melodious sound.

Features:
- Low Power consumption
- No contacts, therefore no noise and highly reliable

Applications:
- Buzzer in handheld applications (PDA or other EDP device)
- Phone ringer in cellular applications
- Can be promoted for applications requiring a SMD sounder

Specifications:
- Sound Pressure Level (3Vp-p square wave 10cm): 75dB min. (4kHz)
- Max. Input Voltage: 25Vp-p
- Operating Temp. Range: -20° ~ +70°C
- Storage Temp. Range: -30° ~ +80°C

NYLON SPIN CLIPS

This design combines the advantages of a push-in type fastener with a screw. For fast assembly, the part can be pushed into a 1/4-20 threaded hole, and then screwed in for a tighter fit, or screwed out for disassembly.
This part will also function as a standard Fin Clip for use in an unthreaded hole with a diameter of approximately 13/64".
All nylon spin clips are in a natural color resin.

YLON FASTENERS

ey-Hole Clips
key-hole shaped interior allows the part to collapse more completely for easy assembly with finger pressure, the tapered, bullet-style point slides into any hole easily. The angled panel lock section takes up slack in eis to provide for a tight assembly. The design allows for a relatively large clip diameter to hole size ratio, ulting in higher retention force. Parts can be tooled for a large variety of hole and panel variations.

Screw Rivets

Reusable 2-piece construction molded from Nylon 6/6. Two Piece rivets are designed to fasten larger components or small assemblies to their mating panels. Pressing or tapping the screw through the body creates a secure insulated connection. In addition the screw may be removed with a phillips screw driver.

Snap Rivets

Nylon Snap Rivets are designed for assemblies requiring fast and economical fasteners that can be installed without tools. The 2 Piece Molded Fastener comes assembled ready for use. The Rivet is placed in the hole and the smooth, oversized head is pressed. The specially designed legs expand and firmly lock the components permanently in place. The Snap Rivets are molded in high dielectric (UL94V2) Nylon 6/6 making them ideal for electronic applications.

DIMENSIONS IN. and (mm)

Sensors, Inc. pressure sensors are based on piezo-resistive semiconductor technology, broadly referred to as MEMS (micro electrical mechanical systems). Our products, both analog and digital, based upon a proprietary technology to reduce errors. Output changes due to temperature, warm-up stability, long-term stability, and position sensitivity are all significantly reduced when compared to conventional compensation methods. These sensors are intended for use with non-corrosive, non-ionic working fluids, such as air and dry gases. Packaging is designed to be mounted to a printed-circuit board. highly linear pressure sensors are typically used as components in high accuracy instrumentation for markets such as: medical, HVAC, mine safety, off-road vehicles, chemical analysis, and environmental.

Standard DC Fan

The FPC (Fan Performance Curve) is measured from the air chamber. The SRC (imaginary System Resistance Curve) must also be measured in the air chamber as it pertains to each application. The intersection of the FPC and SRC is the operating point (OP). Qb and Pb meet the requirement characteristics of the application.

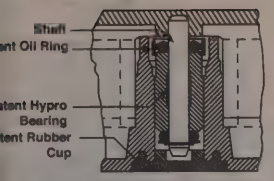
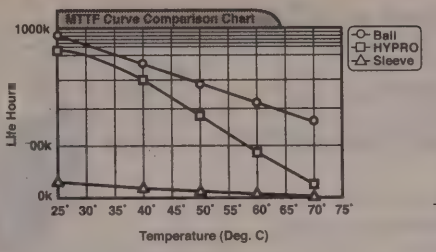
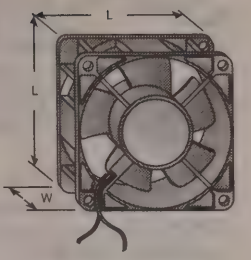
ADDA DC and AC Brushless Fans



Adda's patented hypro bearing (hyp) solves the friction problem normally found in sleeve axial bearings. Traditionally the thrust plate floats on a film of oil which rapidly depletes. Sintered alloy bearings draw oil from the cavities to extend the thrust float. Adda's hypro goes beyond this by actually developing a hypro wave in the I.D. bearing center where a recess oil reservoir is located. This center point actually runs cooler than the outer surface of the bearing and promotes cold to hot flow circulation. Adda's oil recirculation method and lubricant seal greatly extends the life of the fan.





Standard DC Fan

ADDA DC BRUSHLESS FANS WITH HYPRO BEARING

tures:

DDA's patented Hypro bearing uses oil recirculation to extend the life of the fan
y more than 50,000 hours versus ball bearing fans.
l products are tested to stringent 6-Sigma quality in addition to statistical process control.
DDA performs periodic audits on each product to ensure the best quality control.
